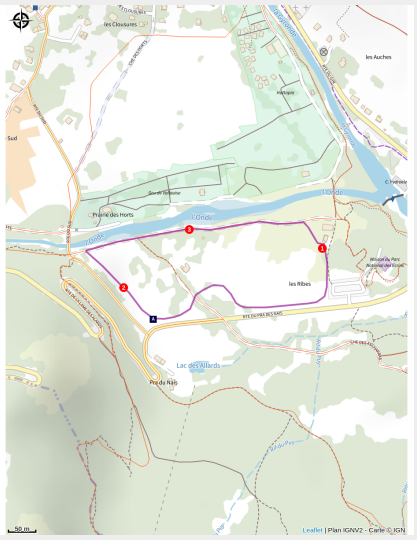
Route No. 13: Le Stade

Parc national des Ecrins

Vallouise (Rogier van Rijn)



SECURED ITINERARY

A 1 km loop around the nordic chalet.

Small initiation loop in the sunshiny plains of Vallouise, ideal for family outings.

Signs : white "snowshoe" signs on purple background.

Description :

Start and finish : Vallouise nordic chalet

1. From the nordic chalet, go along the Pra des Naïs route which goes up towards Puy Saint Vincent.
2. Follow the track towards the Onde river and turn right before the Gérendoine bridge.
3. Walk along the right bank of the Onde river to come back to the nordic chalet.

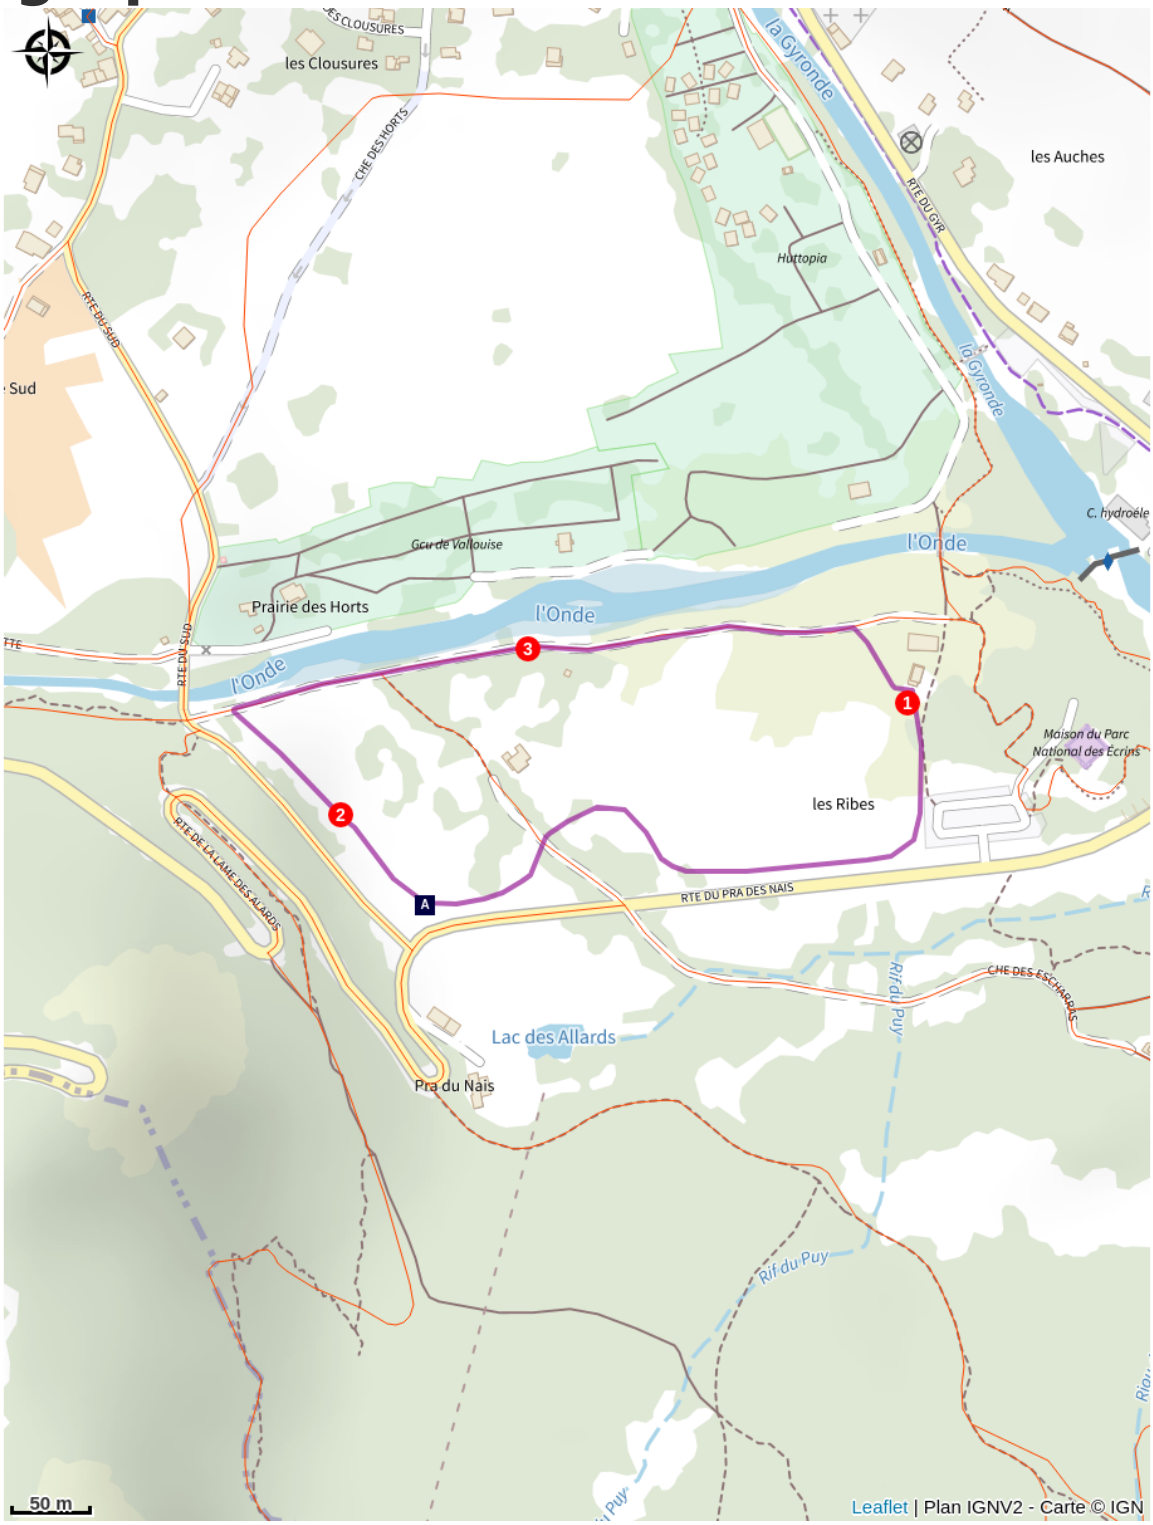
Useful information

Practice : Snowshoe

Duration : 30 min

Quoting : R1

Geographical location



- Wood cranesbill (A)
- The Vallouise Park Centre (C)
- The sun bird (E)
- The gerris (G)
- The long-tailed tit (I)
- The northern wryneck (B)
- The Alpine copse snail (D)
- The ash tree (F)
- The wood nuthatch (H)

All useful information

⚠ Advice

Please consult the itinerary status :
https://www.nordicalpesdusud.com/domaines/vallouise-pelvoux-les-vigneaux

A few rules :

→ You use these routes at your own risk. Find out about the weather conditions and avalanche risks published by Météo France. Also, don't hesitate to ask at tourist information offices or the Nordic chalet before you set off.

→ For avalanche-prone trails, we strongly advise you to take your avalanche transceiver, shovel and probe with you.

→ Night-time activities on Nordic areas are prohibited. It must be supervised by a professional and must be authorized by the ski slopes service.

→ Several itineraries are shared with cross-country skiers and ski tourers: give them priority, always walk along the edge of the piste and be vigilant when crossing these shared paths.

→ Many routes cross downhill ski slopes; be vigilant and give skiers the right of way.

→ Don't walk in the cross-country ski tracks, straddle them.

→ Respect the signposting: dangers, prohibitions, trail directions, among other things.

→ Don't overestimate your abilities!

→ Dogs are tolerated, on a leash, off the cross-country ski trails (dogs prohibited on the Lauzet itinerary of the Puy-Saint-Vincent ski area, reserved for approved sled dog teams).

→ Take your garbage with you!

Please note : This information is given for guidance only. It is your responsibility to check the weather forecast before setting off and not to overestimate your possibilities. The Tourist Office and the PNE cannot be held responsible in the event of an accident. In case of doubt, contact professionals: instructors or equipment hire companies.

Moutain Rescue : dial 112

Gear

Make sure you have the necessary equipment:

Water and snacks
Warm clothing (avoid jeans)
High boots (hiking, rigid snow boots)
Walking poles
Sun screen
Sunglasses
Hat/cap
Small first-aid kit

On your path...

Wood cranesbill (A)

The path is edged with large clumps of a plant with purple flowers, the wood cranesbill. The leaves are palmate and divided into 5 to 7 incised and indented lobes, This common plant grows in meadows and cool woods. The «geraniums» we see on balconies are in fact pelargoniums, distant cousins originally from South Africa and cultivated for ornamental purposes.

The northern wryneck (B)

The old trees in the orchard are home to the northern wryneck. It has a loud song, rather like that of the green woodpecker, only slower. This bird owes its name to the extreme way it extends and twists its neck when it feels threatened. Its French name torcol fourmilier is a reference to the fact that it feeds on ants (fourmils in French). Difficult to spot because its plumage merges into the colour of the tree trunks, it gives its presence away by its song when it returns from its migration.

The Vallouise Park Centre (C)

Vallouise Pelvoux is a municipality within the Parc National des Écrins. Renovated in 2014, the Park Centre ("Maison du Parc") houses the offices of the local Park staff and has a spacious visitor reception area. It offers a permanent interactive exhibition inviting discovery of the territory and its heritage features, a temporary exhibition space on the upper floor and an audiovisual room (screenings and talks). It is currently in the process of applying for the "Tourisme et Handicap" tourism and disability label. Admission is free and so, too, are most of the activities in offer.

The Alpine copse snail (D)

On the damp banks of the stream, hidden in the grass, is a snail with a beautiful golden brown shell speckled with brown, decorated with a dark spiral stripe. It has a black body. The alpine copse snail is relatively rare and, as its name suggests, it is found in the Alps. It is a sub-species of the ordinary copse snail, which is present across Europe.

The sun bird (E)

So what is the identity of this sun bird? It's the royal, or golden, eagle of course. Although it is telling the time here, in the surrounding natural landscape it hunts marmots. But what becomes of it in winter when the marmots hibernate deep in their burrows? It's a lean time. It has to make do with a hare or ptarmigan, and in particular the carcasses of chamois which have not survived the winter or have been killed in an avalanche.

The ash tree (F)

Even in winter, the ash can be recognised from its large black leaf buds. The leaves are compound. A pioneer species that grows easily, the ash has long been used by man for everyday needs: its foliage was used to feed cattle and its hard, flexible wood was used to make a variety of objects such as tool handles. Its French name frêne often appears in local place names too: Freissinières (frêne noir - black ash), Le Freney etc. Evidence of its historical importance to human communities..

The gerris (G)

Some strange creatures are moving jerkily over the surface of the water: Gerrises, insects related to bedbugs. Like a true insect, they have six legs and they «skate» across the water using their intermediate and hind legs which are covered in hairs to make them water-resistant. They are carnivorous and anything on the water surface, dead or alive, is good to eat! They catch their prey with the forelegs, sucking up the juices with their strong proboscis!

The wood nuthatch (H)

With its strident calls, this little acrobat gets itself noticed. With a blue-grey back and a black stripe over its eyes, it works its way down the tree trunks upside down in search of insects. It nests in old woodpecker nests but if the diameter of the entrance is too large it reduces it with mud, to protect its young from predators. Hence its French name torchepot (a reference to edging the rim of a vessel).

The long-tailed tit (I)

Some birds are causing a stir in a tree, constantly coming and going and uttering little calls. They are round and black and pinkish beige in colour with a long tails, hence their name, the long-tailed tit. They are resident birds and always live in small groups. They inhabit forests, undergrowth and even gardens. They weave a ball-shaped nest out of lichen, moss and dry grass.
