

# Plan Vianney lake and the Périer gap

Parc national des Ecrins - Les Deux Alpes

Vue sur le lac de Plan Vianney depuis la brèche du Périer (Thierry Maillet - Parc national des Ecrins)

*Of lesser dimensions and reputation than the Lauvitel, the Plan Vianney lake is however worth the detour, as is the panorama over the Valbonnais Oisans areas from the Périer gap.*

*This demanding hike that starts on the family (and busy) trail that leads to the Lauvitel lake then leaves the crowd to follow a different footpath that is high and steep overlooking the Lauvitel lake followed by the Plan Vianny lake. It therefore has a wonderful view before getting to the Périer gap.*

## Useful information

Practice : By walk

Duration : 7 h

Length : 14.2 km

Trek ascent : 1547 m

Difficulty : Hard

Type : Return trip

Themes : Fauna, Geology, Lake and glacier

# Trek

**Departure** : La Danchère

**Arrival** : la Danchère

**Cities** : 1. Les Deux Alpes  
2. Le Bourg-d'Oisans

## Altimetric profile

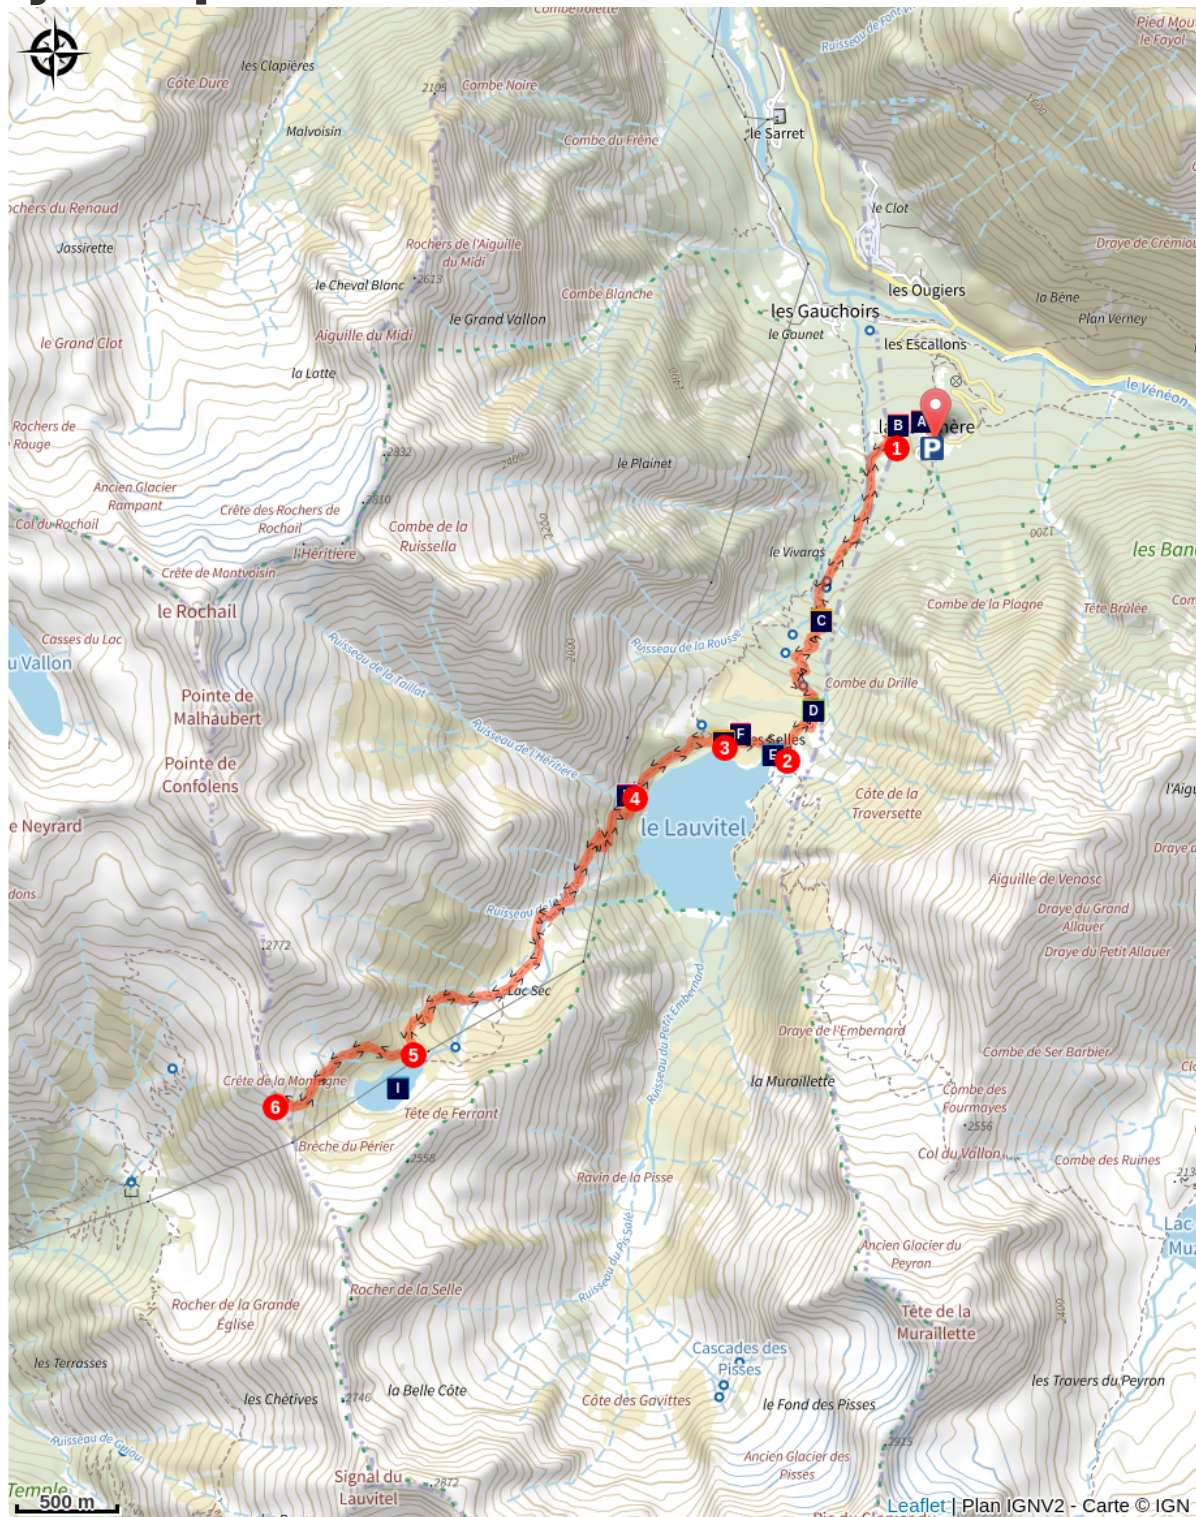

Min elevation 978 m    Max elevation 2518 m

Cross the Danchère and continue to the crossing near to the Lauvitel stream. Go up the paved road to the left on the right bank of the stream. Cross the Selles stream near to the water catchment and climb up the bends among deciduous trees and spruce. After crossing an unobstructed area, you will come to a flat terrain that leads to the edge of the lake (1530m). To the right cross the large blocks towards the huts. Turn left onto a footpath that climbs on a ledge above the lake. Cross the Héritière stream then further on, the Mas stream and continue the meandering climb on the left bank of the Plan Vianney. Cross it to get to the upper valley. Continue up the valley and cross the first rocky projection by climbing up a small grassy corridor (steep slope) then a second, which is not so steep. Link up to the Plan Vianney lake (2250 m) before taking the footpath on a ledge that starts to the right above the lake. Cross over the rocky ledges until you reach a fork at the foot of the last slope. Go straight ahead and climb a vague, steep corridor (crumbling stones), that leads to the summit. Follow it to the right up to the highest point (2576 m) The return trip is made using the same itinerary in the opposite direction.

# On your path...

-  Danchère Chapel (A)
-  Traditional Paving (C)
-  Lauvitel Lake (E)
-  Chalets at altitude (G)
-  Lac de plan Vianney (I)

-  Danchère Hamlet (B)
-  Marmots (D)
-  Natural Dam (F)
-  Vaugnerites (H)

# All useful information

## Is in the midst of the park

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

## ⚠️ Advices

It is preferable to make an early morning start as the path that leads to the Plan Vianney and then the gap is steep and exposed.

## How to come ?

### Transports

Bus stop at Ougiers on the La Bérade - Bourg d'Oisans route. (05voyageurs.com)

### Access

From Bourg d'Oisans, take the F1091 as far as the hamlet of Le Clapier and take the D520 then the D214c to the right.

### Advised parking

Car park at the hamlet of Danchère

# Environmental sensitive areas

Along your trek, you will go through sensitive areas related to the presence of a specific species or environment. In these areas, an appropriate behaviour allows to contribute to their preservation. For detailed information, specific forms are accessible for each area.

## Réserve intégrale du Lauvitel

Sensitivity period: January, February, March, April, May, June, July, August, September, October, November, Decembre

Contact: Parc national des Écrins.

Réserve intégrale, accès interdit.

---

## Danchère Chapel (A)

Dedicated to Saint Louis and to Saint Claude, Danchère Chapel displays its agreeable proportions to visitors. The stones forming the arc of a circle above the entrance and the window do not only have aesthetic value. They are rightly called "a relieving structure" because they help to redistribute the weight of the facade on both sides of the openings. In the recess hidden behind wire netting is a ceramic statue of Saint Louis created in the Tarn region.

---

## Danchère Hamlet (B)

With its paved lanes, its fountains and its stone wash-house, the Danchère offers an ideal starting point for going to Lauvitel which attracts 30 000 visitors every year. It is one of the numerous hamlets that make up the commune of Vénosc.

---

## Traditional Paving (C)

The Lauvitel path is often used especially during the summer. To limit the occurrence of erosion linked to the impact of human use but also to water flowing from melting ice or rain water it is covered with traditional paving, maintained thanks to annual restoration.

---

## Marmots (D)

The marmots are some of the permanent inhabitants of the grassland at the alpine level. . The view is very open, the herbaceous food is abundant and the soil sufficiently soft for them to be able to dig their burrows which are necessary for their survival. Although this animal is wild animal, it can become accustomed to the presence of humans and some marmots have started the bad habit of begging for pieces of biscuit from hikers, crisps and apples. Please do not feed them ! These foods, which are unsuitable to their needs, damage their health and survival. Would you think of eating grass in order to survive?

## Lauvitel Lake (E)

Lauvitel Lake is the biggest (around 25-35 ha) and the deepest (40-65 m) in the Ecrins National Park. A rocky landslide around 4000 years ago, added to an existing glacial moraine to form a natural dam capable of retaining such a volume of water. The waters of the lake are cold and well oxygenated. They suit several species of fish including the Arctic Char or the Brown Trout which were introduced for anglers. Today the Lake Lauvitel is the subject of numerous scientific studies: physical parameters, sediment, phyto et zooplankton are collected and analyzed.

## Natural Dam (F)

Around 4000 years ago, a rocky landslide added to an existing glacial moraine to form a natural dam capable of retaining this large volume of water. The seasonal variation of the level of the lake of 20 to 25 m is due to the permeability of the materials making the dam. In fact the lake does not have a spillway and the water infiltrates the boulders of the dam. It offers a beautiful view of the lake which infact inspired the painters at l'Abbé Guétal.

---

## Chalets at altitude (G)

On the Lauvitel dam are ancient prairie chalets as well as chalets that were built between the two World Wars to welcome hunters and anglers. Formally a private property, this valley was rented out to the 'Bourgeoisie Dauphinoise' for hunting. Angling, on the other hand, is still practised: it is managed by the Lauvitel Society for private angling. One of the chalets is still used to today to house agents from the Ecrins National Park and scientists from the nature reserve.

## Vaugnerites (H)

On the footpath leading to the Plan Vianney lake, essentially in the coomb of l'Héritière, outcrops of vaugnerites can be seen. These are dark rocks containing many mica flakes. Chemically similar to lamproite (magmatic rocks with high potassium content), they form enclaves of different sizes from 10 cm to several tens of metres, in the Rochail granite.

---

## Lac de plan Vianney (I)

The Plan Vianney lake is home to a good population of brook trout, also known as brook charr or speckled trout. Demanding concerning water quality, this species requires clear, cool well-oxygenated water. Here its reproduction is not through rearing. Fishing is not authorised by decree made the Ecrins National Park's director. Exceptions are made for fishing as part of scientific studies only.
