

The Buffe valley

Parc national des Ecrins - La Grave

Randonneurs arrivant au hameau du Rivet de la Cime avec la Meije en toile de fond (Cyril Coursier - Parc national des Ecrins)

This lovely itinerary will have you discovering the natural diversity of the Buffe valley. The valley is overlooked by the Mas de la Grave Peak. The Gâ stream has its source at the foot of the peak.

The valley pastures are very popular among transhumant herders who bring their flocks from the South of France. Since wolves were seen in the area, the "patou" (a large dog belonging to shepherds) reappeared a few years ago.

Useful information

Practice : By walk

Duration : 4 h

Length : 12.1 km

Trek ascent : 398 m

Difficulty : Medium

Type : Loop

Themes : Fauna, Flora, Geology

Trek

Departure : Hameau du Chazelet

Arrival : Hameau du Chazelet

Cities : 1. La Grave

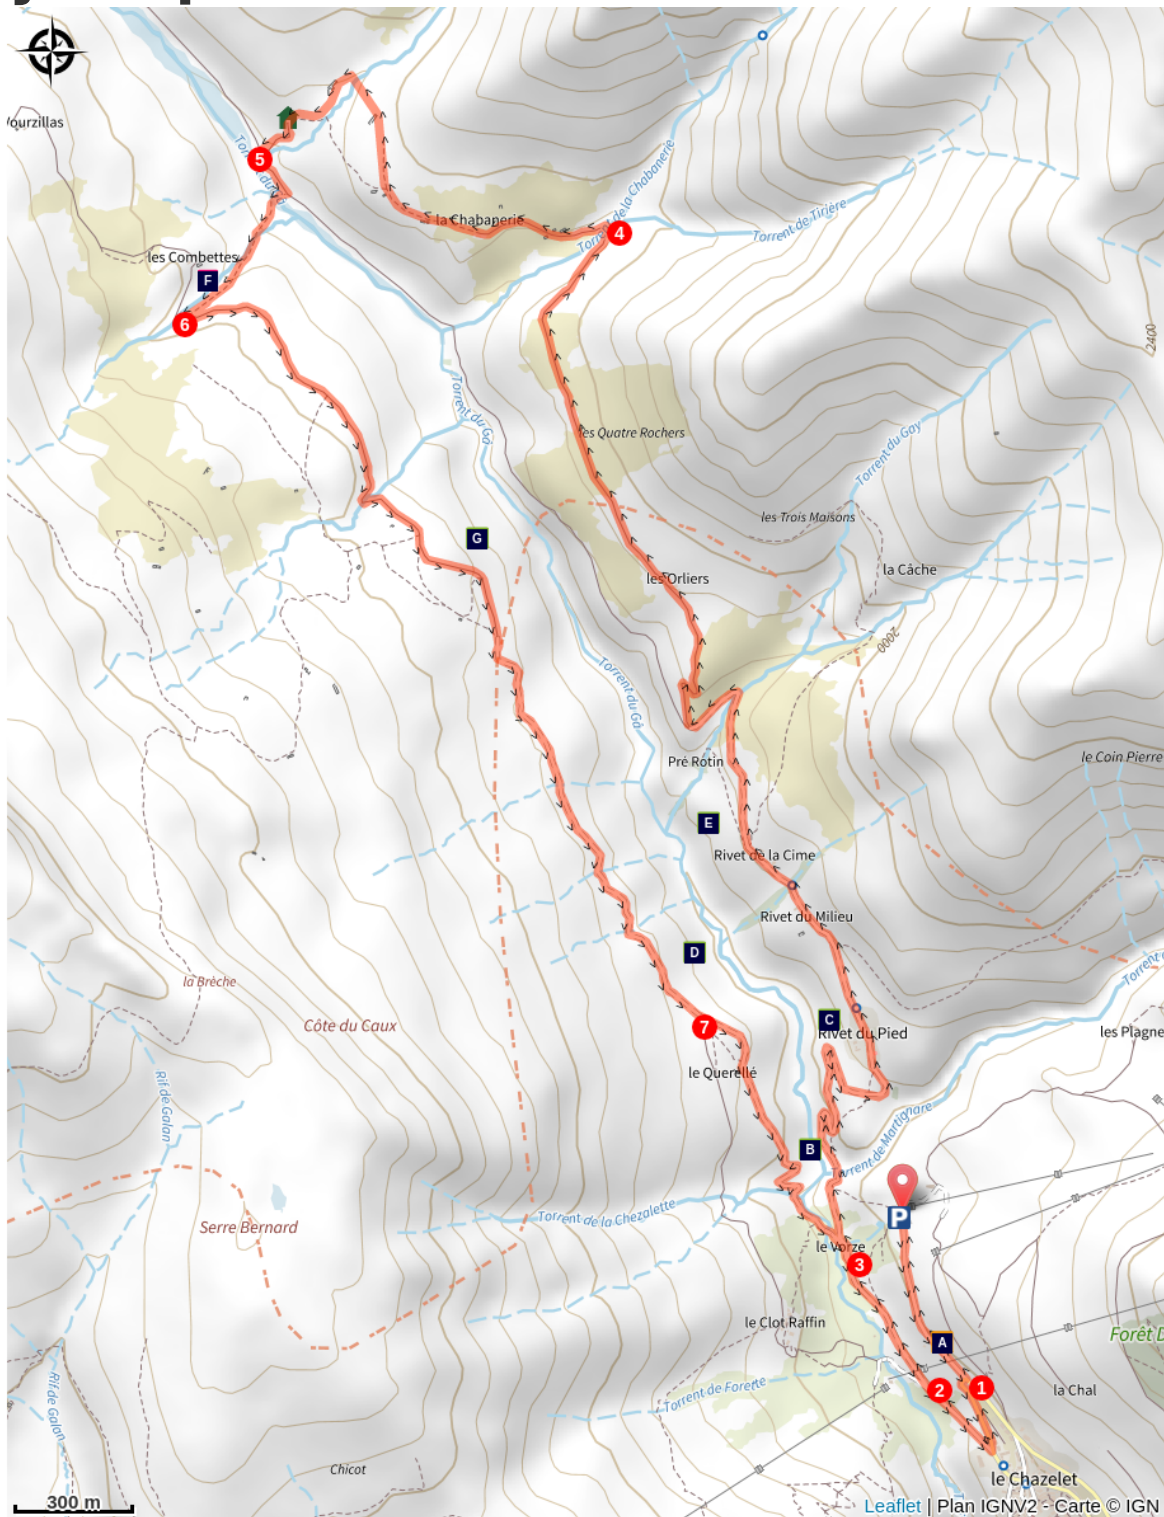

Altimetric profile

Min elevation 1752 m Max elevation 1981 m

From the car park, head down towards the village. At the first crossing, do not go up into the village but take the hairpin to the right towards the ski lifts. At the second crossing, stay on the hillside (do not go down to the stream). Continue on the large track and at the following crossing, turn right towards the three hamlets of Les Rivets. Walk through them to reach La Croix (cross) de Tuf (1901 m). At the cross, go up to the right towards the Orliers mountain hut. Follow the track, cross the Chabanerie stream and go past the chalet that has the same name. Continue along the hillside until you reach the ruins located at the edge of the Courbeille stream. Go down towards the wide track and follow it left for 200 m then cross the Gâ stream (footbridge). Head back up the other side along a steep footpath until you reach the track for Les Combettes. Turn left and follow it to the end arriving at Le Querellé. Do not turn right onto the footpath that leads to Clot Raffin, but continue along the track that goes down to the "pont de la mine (mine bridge)". Cross the stream and head up towards Le Chazelet and the start of the itinerary.

On your path...

-  Chazelet Cattle Fair (A)
-  Altitude hayfields (C)
-  Common quail (E)

-  Campanula thyrsoide (B)
-  Viviparous lizard (D)

All useful information

Herd protection dogs

In mountain pastures, protection dogs are there to protect the herds from predators (wolves, etc.).

When I hike I adapt my behavior by going around the herd and pausing for the dog to identify me.

Find out more about the actions to adopt with the article ["Protection dogs: a context and actions to adopt"](#).

Tell us about your meeting by answering this [survey](#).

Advices

There may be herds of cattle on the footpath: walk around them unless you want to face the patou dogs!

How to come ?

Transports

Bus Grenoble bus station/SNCF - La Grave / Villar d'Arène - Briançon (LER 35 - Transisère).

Access

From Bourg d'Oisans, follow the D1091 and go through La Grave. As you come out of the tunnel, turn right onto the D33 and head towards Le Chazelet.

Advised parking

Car park above Le Chazelet

On your path...

Chazelet Cattle Fair (A)

This an old market that still exists and gives local farmers the opportunity to sell young "Abondance" or "Tarine" cows, that are needed to make Beaufort and Reblochon cheeses, to farmers from Savoie, Haute Savoie and Italy. The traders, who are easy to identify with their hats and black cloaks, and the worried-looking breeders barter, whilst stalls of bells and other objects lend a festive feel to the event.

Attribution : Gérald Lucas

Campanula thyrsoide (B)

This flower is an emblem of the area of La Grave and is recognisable among all others thanks to its yellow flowers that form a compact flower head also known as "thyrses". It is edible in a cheese-topped bake and is one of the rare biennial alpine plants. The seeds are scattered in the autumn and in the first year grow into big long leaves that form a rosette. Blossoming only occurs in the second year, when after ensuring reproduction, the plant dies.

Altitude hayfields (C)

Natural hayfields are of great biological variety and are home to associations of plants that blossom freely. From this botanical variety come a multitude of insects and more particularly butterflies that find an ideal environment for their development. Maintaining the balance of these zones is essential, even more so at this altitude and in such a valley.

Attribution : Mireille Coulon - PNE

Viviparous lizard (D)

The viviparous or common lizard is present in the north of the park where it lives in cool, damp zones (moors, alpine and subalpine meadows, or at the edge of streams). It has this name as the females, in certain populations, keep the eggs in their abdomen until they hatch. Affected by any development that leads to the destruction of wet zones, it is a protected species all over France and considered vulnerable on a regional level.

Common quail (E)

Generally present in fields of cereal crops, the common quail also occupies the mountain meadows up to 2000 m or more. In the long grass, it pecks at insects and later on at the seeds as they reach maturity. A very discreet bird, it nests in the ground in a little dip, where it can lay twice to replace eggs in the case of destruction. Its song, that can be heard night and day, often gives it away: "pay your debts" is the male's song to keep its rivals at bay.
