

From Monêtier-les-Bains to Vallouise via Col de l'Eychauda (stage of the GR 54)

Briançonnais - Le Monêtier-les-Bains

Les chalets de Chambran (© Pierre Masclaux)

From La Guisane to La Vallouise, this stage takes in the famous Col de l'Eychauda before reaching the alpine pastures of Chambran.

A brief foray into the Guisane valley, better known as the Serre Chevalier valley, and already the summits are rising all around us. The climb is gentle and shaded, and arrives in the alpine pastures with their Monêtier ski-lifts. We must wait until Col de l'Eychauda to leave the landscaped areas and take in the breathtaking view over the Chambran valley. A stop at the pastoral hut is also an invitation for a stroll. But there is still a long way to go and Vallouise, lower down, is full of treasures.

Useful information

Practice : By walk

Duration : 7 h

Length : 21.7 km

Trek ascent : 995 m

Difficulty : Hard

Type : Stage

Themes : Flora, Geology, History and architecture

Departure : Le Monétier-les-Bains

Arrival : La Vallouise

Markings :  GR

Cities : 1. Le Monétier-les-Bains

2. Vallouise-Pelvoux

Altimetric profile

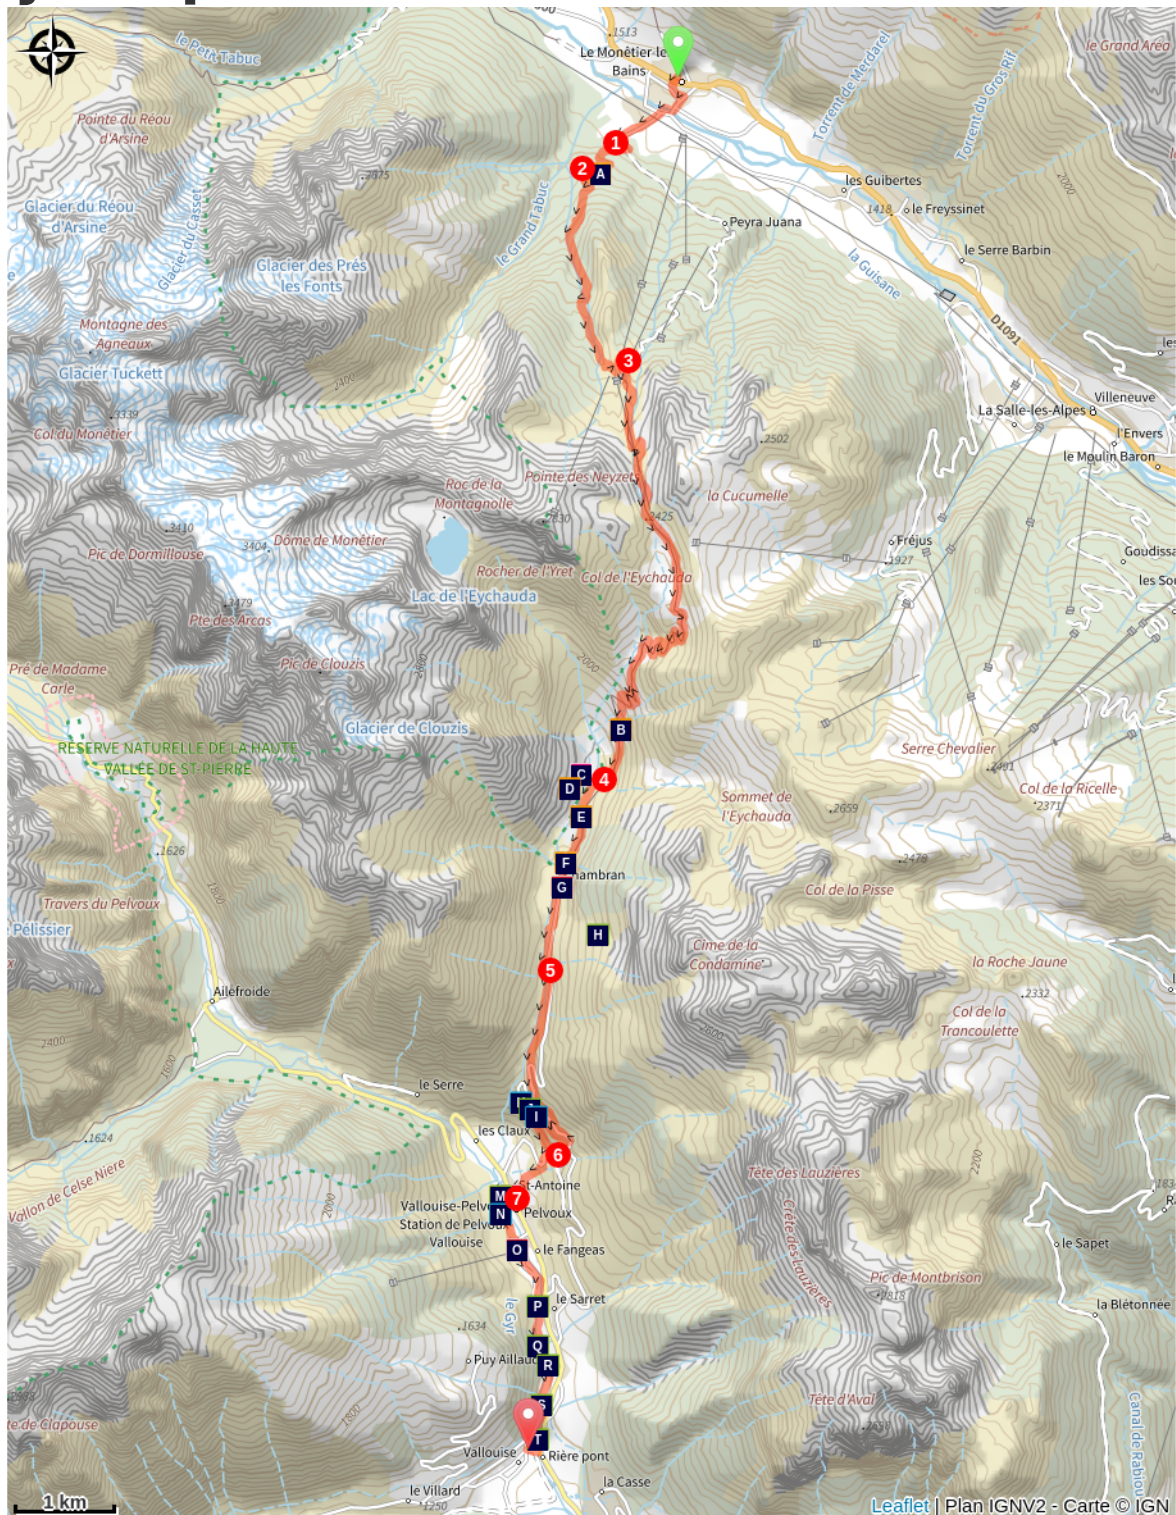

Min elevation 1162 m Max elevation 2429 m

Opposite the Grands Bains, go past the Arts et Vie (SO) residence along a road leading to a car park.

1. Turn left towards Peyra Juana. 200 metres further on, take the right-hand footpath towards the Saint-Antoine du Charvet chapel (1 608 m). Walk around the chapel and then go up along the footpath on the right.
2. At the next intersection, stay on the GR footpath to the left. The path follows La Selle mountain stream beneath the crests of the Lauzières. It then leaves the forest near the high-altitude restaurant and the departure point for three chairlifts.
3. Continue along the valley on the left under the Eychauda chairlift as far as the mountain pass of the same name (2 425 m). On the left you pass by the Col de la Cucumelle footpath. The route down the Neyzet ravine goes under one more chairlift. On the left you pass by the paths to Col de Fréjus and Col de La Pisse. Under the Roche Gauthier, the route descends a rocky escarpment, then the footpath runs along the Sastrière ravine and across a series of three ravines.
4. At the ruins of the Riou-la-Selle chalet (1 750 m), the wide footpath joins up again with the track going up to the "Lac de l'Eychauda". Walk along the road as far as the Chambran chalets (1 715 m). Continue along the road that runs alongside the torrent.
5. Take the path to the right (1689 m), which crosses the road to meet it again at a lower level. Follow the road for 300 metres, then rejoin the path after the house on the bend (1531 m). At the Baumasse ravine (1417 m), cross the road and join a path beneath the road. This path follows the road and then bends left to continue downhill towards Vallouise.
6. At the junction, turn right towards Le Riou. The path crosses the road and rejoins it a little further down. Follow the road for a few metres to find the path on the left at the bend. This path ends in a street that you have to walk down to get back onto the main road.
7. Cross the road and go over the bridge over the torrent. Just after the bridge, turn left onto the path that follows the torrent. Go past the sports fields and swimming pool and continue along the torrent until you reach a bridge, which you must cross to continue along the left bank towards Vallouise. Cross the bridge to reach the village centre.

All useful information

Is in the midst of the park

The national park is an unrestricted natural area but subjected to regulations which must be known by all visitors.

Environmental sensitive areas

Along your trek, you will go through sensitive areas related to the presence of a specific species or environment. In these areas, an appropriate behaviour allows to contribute to their preservation. For detailed information, specific forms are accessible for each area.

Black grouse - winter

Sensitivity period: January, February, March, April, Decembre

On your path...

Charvet Chapel (A)

Near the arrival of the old Charvet button lift, dating from 1948 (still present, but disused since the end of the 2003/2004 season), is the Charvet chapel, which was built in 1755. Easy to access both in summer and winter from Le Monétier, it provides hikers with a wonderful panorama over the southern Guisane valley.

It is quite unusual for a chapel in the region to be dedicated to Saint Anthony of Padua rather than to Saint Anthony the Great. Was there a shift in patronage over time? The fact the saints had the same name led to the particular qualities of each one being mixed up.

Attribution : © Florence Chalandon

The old hay meadows (B)

Lower down as you cross the area, near the pastoral Cabane de l'Eychauda, you can make out piles of stones, the clapiers formed by the removal of stones from the hay meadows. In order to feed the livestock right through the winter, it was necessary to garner a large amount of hay! With changes in livestock farming practices, there are no longer cut for hay, but used for grazing. Only a tiny area of the valley - the flattest - is still mown for hay, mechanically.

Attribution : Office de tourisme Pays des Écrins

The front of the nappes (C)

The two slopes of the Chambran valley are very different: the right bank, minerals are very present. There are granites and gneiss making up the crystalline base of the Ecrins massif. On the left bank, the prairies are sandstone and chalky. These are part of the glacial thrust sheet: they are ancient sediments deposited mostly to the East, in the Alpine ocean, then carried here by compression at the time of the formation of the Alps.

Attribution : Marie-Geneviève Nicolas

Evolution of pastoralism (D)

In the valley, the ruins of numerous piles of stones resulting from the removal of stones in the hay meadows are witness to another age. Most of these old prairies are now grazed by sheep. Pastoralism has evolved: no more local flocks so less hay, the valley is now occupied by a large flock from the Haute-Provence Alps.

Attribution : Mireille Coulon - PNE

The realm of sheep (E)

Together with its entire catchment area, the Chambran valley constitutes an enormous alpine pasture. Sheep belonging to several different owners are gathered here for the summer grazing season. Many of them come from the department of Alpes-de-Haute-Provence. The landscape (sheep paths, old hay meadows), vegetation, built structures (old dairy, pastoral cabins)... everything has been marked by centuries of animal husbandry.

Chambran Hamlet (F)

At an altitude of 1700 meters, this hamlet is inhabited in summer, at the beginning of the summer pasture. The old dairy has been spruced up to become a snack bar. It's pretty little chapel dedicated to Saint Jean is very simple and bare.

Attribution : Marie-Geneviève Nicolas - PNE

Chambran chalets (G)

Remnants of a way of life that has disappeared, the Chambran chalets were once a high-altitude village where flocks stayed during the summer months. Today this is a welcome stop along the GR54 and the starting point for hikes towards Lake Eychauda.

Attribution : Marie-Geneviève Nicolas - PNE

Choughs and red-billed choughs (H)

A flight of black birds twists and turns before descending on the alpine meadows. The choughs are seeking out meagre takings, preferably small invertebrates. Great acrobats and sociable birds, they stand out with their yellow beaks and red legs. Sometimes a few red-billed choughs mingle with them. These are more timid and have a red beak and red legs. Both species nest on cliffs.

ASA of Béal Neuf (I)

The ASA (authorised water user association) of Béal Neuf is the owner of the canal. The association manages, maintains and develops the Béal Neuf canal which carries water to the entire network of irrigation canals.

Attribution : Office de tourisme Pays des Écrins

The aspen (J)

The path runs through a small aspen wood. This tree with a smooth, greenish trunk and rounded, crenelated leaves takes on magnificent autumn colours. The stem, or petiole, of aspen leaves is flat and twisted, so it can be caught by the slightest breeze making the foliage «quake» hence its common name, the quaking aspen. It grows in places where the soil is quite damp.

Attribution : Mireille Coulon - Parc national des Écrins

Water in the mountains (K)

Since the Middle Ages, canals have been dug to carry water to the crops. The water is diverted by the canals: through the action of gravity, the water flows down the mountain sides. Use of the water is regulated and for any draw-off, the volume is measured.

Attribution : Office de tourisme Pays des Écrins

The minor heritage of Pelvoux (L)

Every hamlet has its own chapel. In the territory of Pelvoux, Les Claux has the chapel of Sainte-Barbe with a restored sun dial dating from 1792. The seventeenth-century chapel of Saint-Pancrace is in Le Poët. In Le Sarret, you can admire the chapel of Saint-Joseph and the chapel of Notre-Dame des Sept Douleurs stands in Le Fangeas. Every hamlet has its own communal oven and water fountains as well. Finally, the church of Saint-Antoine is located in the hamlet of Saint-Antoine. It has a sun dial dating from 1810.

The grey alder (M)

In the valleys of the Alps and the Jura, the grey alder often grows in place of the black alder, present in many parts of France. Like its cousin, it grows on riversides and plays an important role in stabilising the banks. If it is cut down, its wood is bright orange in colour. But why cut it down?

Attribution : Nicollet Bernard - Parc national des Écrins

The Gyr (N)

Humans are decidedly bizarre animals: they build, knock down and start again. To protect the new infrastructures of Pelvoux, the Gyr was dammed. But, not able to flow as it did before, it deepened its bed, thus placing the foundations in danger of damage. And so works were carried out to widen its bed, allowing it to flow more naturally. This is also more favourable for biodiversity, as well as protecting the developed urban areas.

The ski resort of Pelvoux-Vallouise (O)

The route first leads through the small ski resort of Pelvoux-Vallouise, built in 1982. Very family-focused, in winter it's the ideal place for young children to learn to ski, with small lifts lower down, while their big brothers and sisters can ski higher up.

Attribution : Pelvoux Office de tourisme du Pays des Écrins

✿ Silver spike grass (P)

A grass grows in large clumps on the embankment: silver spike grass. It is adapted to stony, dry and sunny ground. Its inflorescences reflecting silvery-gold glints create a beautiful effect, but they are particularly noticeable in the late summer, when it forms large shimmering bouquets in the evening sunlight.

Attribution : Nicolas Marie-Geneviève - Parc national des Écrins

✿ The aspen (Q)

On the right, a stand of aspens with smooth, greenish trunks and rounded, crenelated leaves take on magnificent colours in autumn. The stem, or petiole, of aspen leaves is flat and twisted, so it can be caught by the slightest breeze making the foliage «quake» hence its common name, the quaking aspen.

Attribution : Bernard Nicollet - Parc national des Écrins

🦉 The white-throated dipper (R)

Perched on a rock in the middle of the river, a squat bird with a short tail, brown with a large white bib, bobs up and down with his tail in the air. He then dives and only reappears a few moments later. This is how this bird hunts, diving into the water and then walking against the current along the river bed searching for aquatic insect larvae, small crustaceans or small fish, lifting pebbles with its beak to dislodge them.

Attribution : Mireille Coulon - Parc national des Écrins

✿ Forest on the water's edge (S)

This small wood is a fragment of the riparian forest: natural forest growing adjacent to a body of water. Reduced everywhere due to urbanisation, this type of forest is made up of alder, willow and oak, and also poplar, birch and aspen, among others

Attribution : Office de tourisme Pays des Écrins

The trout (T)

But what's the angler angling for? The brown trout of course! This is the mountain fish par excellence, with a streamlined body to withstand the current more efficiently and light brown skin speckled with black and red. It lives in cold, oxygen-rich waters.
