

Le Poux circuit (no. 1)

Saint-Martin-de-Queyrières

Poux 3 (Thibaut Blais)

Running above the municipality of Saint-Martin-de-Queyrières, this circuit offers a tranquil, simple walk along easy, accessible paths.

This mountain bike route invites you on a discovery of one of the key climbing sites in the Pays des Écrins, called the Rocher Baron. You will then pass through two small hamlets in the municipality of Saint-Martin-de-Queyrières, both built around their alpine pasture chapel. Both villages stand on the banks of the mountain stream which has shaped the Saint-Sébastien valley. The circuit ends with a descent through a conifer forest overlooking the municipality.

Useful information

Practice : Mountain bike

Duration : 1 h 30

Length : 7.7 km

Trek ascent : 488 m

Difficulty : Hard

Type : Loop

Themes : Fauna, Flora, Geology, History and architecture

Trek

Departure : Mayor's office ("Mairie"), Saint-Martin-de-Queyrières

Arrival : Mayor's office ("Mairie"), Saint-Martin-de-Queyrières

Markings : 🚶 VTT

Cities : 1. Saint-Martin-de-Queyrières

Altimetric profile

Min elevation 1178 m Max elevation 1664 m

As you leave the car park of the mayor's office ("Mairie") in Saint-Martin-de-Queyrières, turn left.

1. After crossing the Saint-Sébastien mountain stream, head right towards the Rocher Baron, a drivable track all the way
2. When you reach the plateau of the Rocher Baron, head right
3. At Le Clot de la Rama, carry on along the drivable track towards Le Pas du Rif
4. Cross the footbridge over the Saint-Sébastien mountain stream, heading towards Le Poux
5. Approximately 500 metres after the footbridge, turn right off the track and follow the path running downhill
6. 200 metres after the water catchment, leave the track and turn right towards the municipality of Saint-Martin-de-Queyrières and your starting point

All useful information

Herd protection dogs - ATV

In mountain pastures, protection dogs are there to protect the herds from predators (wolves, etc.).

When mountain biking, I adapt my behavior by going around the herd, pausing and getting off the bike so the dog can identify me.

Find out more about the actions to adopt with the article ["Protection dogs: a context and actions to adopt"](#).

Tell us about your meeting by answering this [survey](#).

On your path...

The fault (A)

The series of faults in the Durance has long been known to alpine geologists. Categorised as « normal », these faults are openings associated with a movement of extension and stretching of the Briançonnais zone in contact with the Dauphinois zone located further to the west. Warning: it is dangerous and prohibited to approach a fault. Risk of rock falls.

The willow tit (B)

A small resident passerine with a black cap, brown back and white underside, the willow or alpine tit lives in the mountain forests. It selects a trunk with rotten wood in which to built its nest, because its beak is not designed for pecking into very solid trunks. This tit is very similar to the marsh tit, which tends to live below 1,400 metres. To distinguish between them, you have to listen carefully to the singing and calls of these two birds.

The gooseberry (C)

Watch out, it's spiky! The gooseberry is a thorny little bush, and very common in this area. In fact, it grows well in dry ground. It bears whitish, sometimes purplish, fruits covered in rather stiff hairs. Its long, strong thorns often discourage people from gathering its fruits, and the feel of the stiff hairs is rather strange in the mouth. But it's worth the effort: they are very tasty!

The large marsh grasshopper (D)

In the wet areas beside the streams lives the large marsh grasshopper. Its French name, *criquet engsanglanté*, translates as the "bloodied grasshopper" because the female has purple-red marks which stand out against her general green colour. Her eggs are drought-sensitive so she only lays them in damp soil. When courting the female, the male does not chirp but makes clicking sounds, which he produces by stretching his hind leg in a sudden movement.

Le Clot de la Rama (E)

Le Clot de la Rama is a small hamlet in the municipality of Saint-Martin-de-Queyrières. It lies in the Saint-Sébastien valley by the mountain stream, at an altitude of 1,500 metres. Still populated, this small hamlet had several alpine pasture chalets which trace its history and show how valuable the land was. In addition, there is still an alpine pasture chapel here, called the chapel of Sainte-Marie-Madeleine which is marked by its history.
