

From Chorges to Embrun

Embrunais - Chorges

alentours de la Baie St-Michel (Parc national des Ecrins - Emmanuel Danjou)

Apart from the lake shores and the final descent, this stage is relatively easy to negotiate with one major ascent: "La Côte de l'Orme".

Against the backdrop of the southern slopes of the Aiguilles de Chabrière and Mont Guillaume, this route runs from inlet to inlet, alternating between fun trails along the lake shore, pine woods and delightful beaches! Take to the heights to enjoy panoramic views over the whole lake. The final stretch is a "must-ride" descent of the Embrunais area: the famous "Descente des Tourniquets".

Useful information

Practice : Mountain bike

Duration : 4 h 30

Length : 40.0 km

Trek ascent : 1142 m

Difficulty : Hard

Type : Stage

Themes : History and architecture, Panorama

Departure : Chorges

Arrival : Plan d'eau d'Embrun

Markings : ➡ VTT

Cities : 1. Chorges

2. Prunières

3. Savines-le-Lac

4. Saint-Apollinaire

5. Puy-Sanières

6. Embrun

Altimetric profile

Min elevation 780 m Max elevation 1168 m

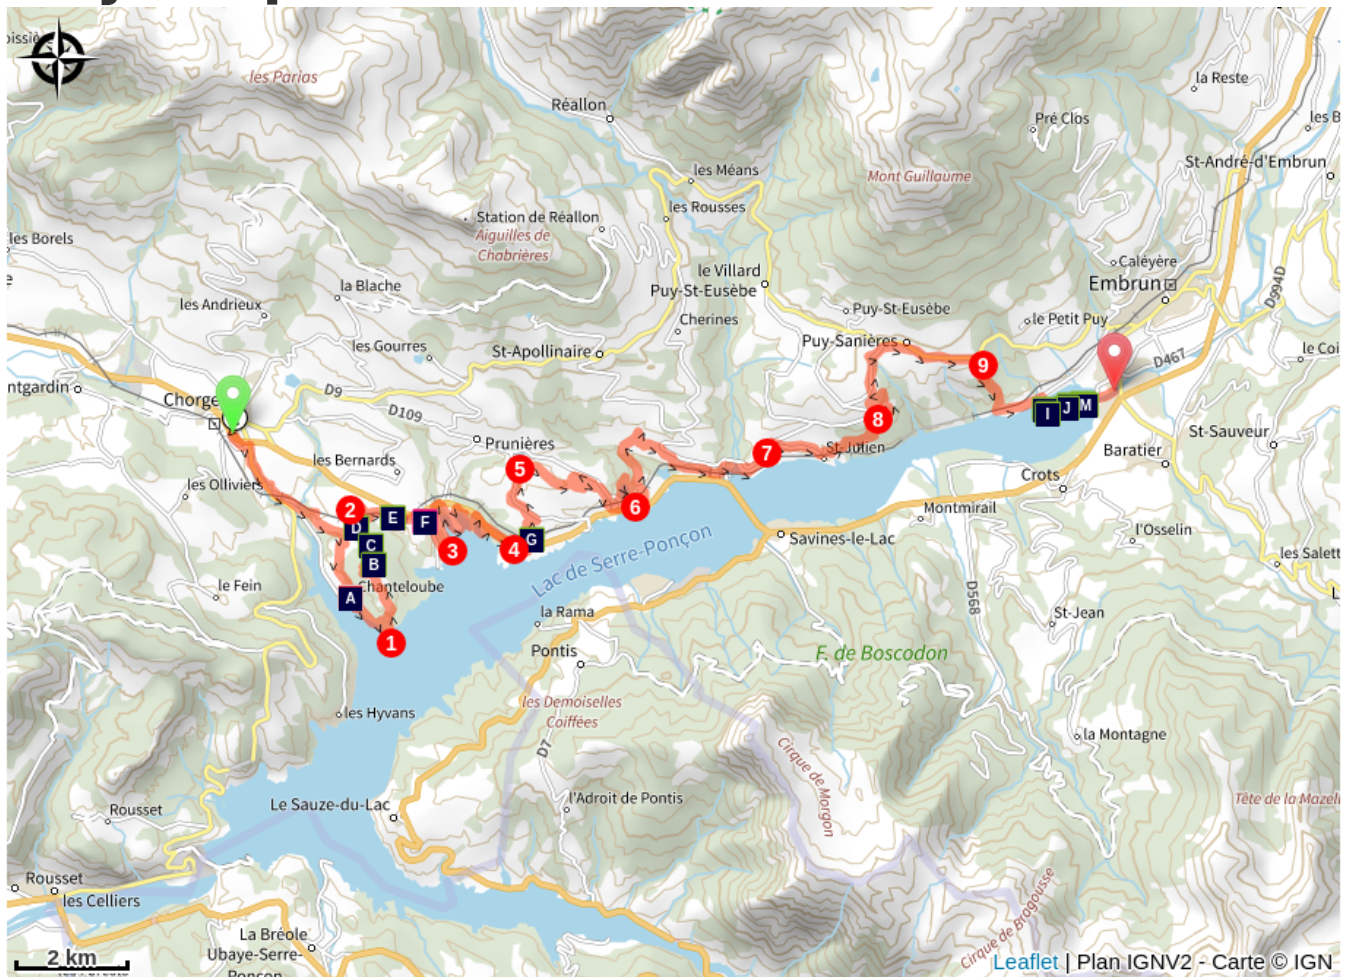

At Prévalier, turn right and then right again towards the Baie Saint-Michel and then the Baie de Chanteloube.(D3). Leave the D3 and go left up the road towards Malmiellon. At the chapel of Chanteloube, head down the road on the right. After the bridge, take the road on the right.

1. At the car park in Chanteloube, take the small paved road leading to the "Dunes" ridge. At Le Serre de l'Aigle, go straight on and then head uphill right and then right again on the tracks. At Les Devandines, head left downhill.
2. At Champ de Gorny, take the downhill trail opposite towards the Baie Saint Michel. At Le Mas des Bâtardes, take the road on the right. Carry straight on towards Aquaparc. Before the campsite entrance, take the trail on the left (/!\ steep slope).
3. At the car park at the Baie de Saint-Michel head up the road on the left to the treetop adventure park. Cross [the right-hand side] of the Marasse car park, and take the downhill trail on the left heading towards Mauduech (some pushing). Then stay on the small road until you come to the N94. Go along the right-hand side of the N94 (take care) and enter the lay-by area. Go through the gate and head downhill to the right. After 150 metres, turn left onto the hairpin trail. You reach the car park in Mauduech via the main trail (Some pushing). At the car park, take the road on the right /!\ (RN94).
4. At the road to the Camping du Roustou, take the service road opposite. Do not go downhill towards the lake, but climb uphill on the path on the left. Be alert, a trail winds off in hairpins to the left (viewing point) and runs under the road. Follow the mountain stream uphill and take the path on the right heading towards the building. At the four-track intersection, take the right-hand path which takes you to the road. Turn left uphill.
5. At the Pra Perrier crossroads, turn right onto the uphill path. Stay on the level track and then head downhill through the pines. When you come to the old road, head right downhill. On a right-hand bend, take a left to enter the Mont Guillaume forest. Ride along the shore of the Baie du Clot Olivier.
6. Before the SNCF railway bridge, turn left uphill. At the Mazet ravine, take the downhill trail on the right which takes you to a vineyard hut. Turn right and this takes you to the hamlet of Les Villards. At Roubeyères, head right down the

road. Stay on the D41 until you come to the roundabout: Go straight on onto the RD641 heading towards Puy-Sanières.

7. In La Rochette, after the climbing site car park, go down the road on the right and, before the bridge, take the trail running downhill to the left. When you come to a path, turn right up the Côte de l'Orme hill. At the branching junction, continue heading left uphill. At the crossroads down from the water treatment plant, take the uphill route on the right, along the track DFCI g38. Stay on the path, taking options leading left until you come to the road.
8. At the belvedere of Le Pibou, take the first DFCI track on the right. Carry straight on until you come to the hamlet of Les Bouteils. Turn right towards the gîte "Au Fil de l'Eau" at 400 m. Leave Puy-Sanières heading right downhill along the RD309. On the left-hand bend, take the "Descente des Tourniquets". After the bridge, take the path on the left.
9. At the lakeside gardens, after the bar, turn right towards the water sports centre ("Base nautique") and back to the lake via the dam track ("Chemin de la Digue").

All useful information

Advices

There are numerous activities on offer at Chanteloube and in particular the Baie Saint-Michel: bathing, paddle, adventure park etc. Take care on the short sections of main road and on the Descente des Tourniquets. Before Mauduech it is possible to picnic in the shade of the pine trees. E-bikes can be charged at the bar-restaurant at the Le Roustou campsite.

Environmental sensitive areas

Along your trek, you will go through sensitive areas related to the presence of a specific species or environment. In these areas, an appropriate behaviour allows to contribute to their preservation. For detailed information, specific forms are accessible for each area.

Short-toed snake eagle

Sensitivity period: March, April, May, June, July, August, September

Contact: Parc National des Écrins
Julien Charron
julien.charron@ecrins-parcnational.fr

Nidification du Circaète-Jean-le-Blanc

Les pratiques qui peuvent avoir une interaction avec le Circaète-Jean-le-Blanc en période de nidification sont principalement les pratiques aériennes comme le vol libre ou le vol motorisé.

Merci d'essayer d'éviter la zone ou de rester à une distance minimale de 300m sol quand vous la survolez soit 1310m d'altitude !

On your path...

Chapel of St-Jacques (A)

Located in Chanteloube, this church is through to date back to 1510. It has retained all its authenticity, with its exposed stone. It is dedicated to Saint James, one of the 12 apostles and one of the first martyrs of the Catholic church. Its recent restoration has made it possible to hold the traditional celebrations there, in honour of Saint James. The purpose of each one is to commemorate a historical event connected with the saint. When he died, he was taken to Compostella in Spain, hence the name of the pilgrim's Way of Saint James to Santiago de Compostella, a religious route passing along the shores of the Serre-Ponçon lake.

Attribution : Amélie Vallier

Common magpie (B)

This bird can be identified by its black and white plumage with blue-green tints on the wings and tail. Its tail is remarkably long. It can be found all year round in varied open environments. Its omnivorous diet consists of invertebrates, seeds and berries, small rodents, eggs and nestlings and even human rubbish. Except during the nesting period when it is solitary, the magpie is gregarious species which gathers into rather raucous groups in the winter.

Common juniper (C)

This bush is a resinous evergreen conifer. It is characterised by its greenish to blue (glaucous) needles with a white line on their upper side, and fruits resembling blue-black berries. It usually tends to grow in warm environments receiving plenty of sunlight. It grows in grassy or scrub covered areas up to 2,000 metres above sea level.

Attribution : Jean-Pierre Nicolle - PNE

The field cricket (D)

Just 18 to 26 mm long, this little insect has a black head which looks a little like a helmet. The female can be told apart from the male by the presence of a third long appendage at the rear of the body. The cricket's song is heard from April onwards. The male sings his chirping song from the entrance to his burrow. The fertile females lay their eggs in the ground, which remain there for two weeks before the larvae emerge.

Messicole plants (E)

A feature of messicole plants is that they live among crops, even though not sown there deliberately. They are biologically adapted to open areas, and in particular areas that are regularly worked, such as fields. In fact, they use various strategies such as adapting their life cycle and producing large amounts of seeds in order to make up for the disturbance that occurs in their germination area. Many of them are common, such as the poppy, the cornflower and the corn buttercup...

Panorama of the Baie Saint-Michel (F)

This area, which has been provided with picnic amenities, offers the most picturesque panorama over the Lac de Serre-Ponçon. In fact, the lake is 2 kilometres wide at this point, and in front of you are the Chapelle Saint Michel and the Pic Morgon, an iconic view of the lake. On your left, to the east, you can see Savines-le-Lac and its bridge. On the right, you can see the secret île de la Tortue.

Attribution : Amélie Vallier

The Occellated Lizard (G)

This shy lizard is familiar with dry, scrubby environments. It is hard to track down and flees noisily at the slightest danger. It can run very fast, standing up on its legs with its tail raised. Its burrow serves as a refuge and hibernation site, as it is particularly sensitive to the cold. It devours whatever it can find: insects, fruit, molluscs, eggs; small mammals can even be on the menu. It has blue eye-spots on its flanks.

Great Cormorant (H)

Size: 90 cm

Attribution : etienne.charles

Yellow-legged Gull (I)

It has travelled up the Durance and settled on the lake, where it finds propitious conditions for its survival (open water). This gull, a cousin of the seagulls, is omnivorous. The colony can be seen around the lake all year round. They are generally grey or white, with black markings on the wings. They have a long, thick beak and yellow webbed feet. The young are grey in colour and take two to four years to acquire adult plumage.

Attribution : Pascal Saulay - PNE

Grass Carp (J)

This fish takes its French name (Amour Blanc) from the river it originates in, the “Amur” River, which forms the border between China and Siberia. Its powerful body resembles that of the carp, but its low-set eyes are very different. The well-thought-out and reversible introduction of this species by the town of Embrun and the fishermen is a gentle, ecological and controlled way of solving the problem of plant proliferation in the Embrun water body.

Mallard (K)

Not known to be shy, this dabbling duck prefers to feed on the surface or at shallow depths by moving forward with alternating circular strokes of its legs: it dips its head into the water and tilts forward. It nests on the banks of the Durance and is omnivorous, feeding on invertebrates, small fish and grasses... The male is easily recognisable during the breeding season by its bright green head. After this period, they moult and adopt a grey-brown colour close to that of the females and young.

Attribution : Pascal Saulay - PNE

The fry (L)

This is one of the most common 'white' fish. It has a spindle-shaped body, compressed laterally and covered with large silvery scales. Its lower fins and eyes are tinted red. Opportunistic, it eats both plants and tiny prey such as larvae and mosquitoes. It forms large shoals and most of the lake's anglers take their first steps on the water by catching them.

Common Perch (M)

The Perch has a grey-green body with dark stripes. Its scales are rough. It has two dorsal fins, one of which has spiny rays. Its lower and caudal fins are orange. It can grow to around forty centimetres. It is a gregarious and opportunistic carnivore. It feeds on invertebrates and crayfish, but also hunts fish in organised packs. It is a chance for many novice anglers to get their first taste of carnivorous fishing.
