## Herd protection dogs

In mountain pastures, protection dogs are there to protect the herds from predators (wolves, etc.).

When I hike I adapt my behavior by going around the herd and pausing for the dog to identify me.

Find out more about the actions to adopt with the article ["Protection dogs: a context and actions to adopt"](#).

## ✿ Bellflower (A)

This bellflower is highly characteristic, in particular because of its bell-shaped flowers. The bellflower has hermaphrodite flowers, that is to say, both male and female. This rustic plant loves the sun and dry ground. Some species of seedling can withstand arid soils at high altitude.
